Gross Description:

2.

1) The specimen is received fresh for frozen section consultation, labeled "jugular node frozen" and consists of a 1.2 x 1.0 x 0.3 cm soft tissue. The specimen is entirely submitted for frozen section.

Summary of sections:

FSC - frozen section control

2) The specimen is received fresh for frozen section consultation, labeled "right paratracheal lymph nodes" and consists of two pieces of adipose tissue measuring 0.9 and 1.1 cm in greatest dimension. There is no lymph node identified grossly. The specimen is entirely submitted for frozen section.

Summary of sections:

FSC - frozen section control

3). The specimen is received in formalin labeled "Delphian node." It consists of a single piece of pale tan soft tissue measuring 0.7 x 0.6 x 0.3 cm. The specimen is entirely submitted.

Summary of sections:

U - undesignated

4). The specimen is received fresh and placed in formalin, labeled "total thyroidectomy, stitch marks right lobe" and consists of a thyroid weighing 11.5 g after fixation. The right lobe measures 4.2 x 2.1 x 1.2 cm, the left lobe measures 4 x 2 x 1 cm and the isthmus measures 1.7 x 0.7 x 0.5 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals a 1.4 x 1.2 x 1.1 cm white-tan, irregular, partly calcified tumor nodule in the right lobe. The remaining thyroid parenchyma is red tan and beefy. Representative sections of the specimen submitted for the remaining tissue is serially sectioned and entirely submitted.

Summary of sections:
N - nodule, right lobe
LL - left lobe
IS - isthmus
