Gross Description:

1). The specimen is received fresh, labeled "left paratracheal lymph node, thyroid gland and central compartment lymph nodes" and consists of a thyroid weighing 11 g. The right lobe measures 3.5 x 2.5 x 1 cm, the left lobe measures 4 x 2 x 1.5 cm, the isthmus measures 1 x 0.5 x 0.5 cm, and a pyramidal lobe measures 2 x 0.5 x 0.5 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals a 1.2 cm tan nodule with central papillary excrescences in the inferior left lobe. Sections through the remaining tissue reveal multiple bilateral colloid nodules. The remaining thyroid parenchyma is red tan and beefy. There are multiple lymph nodes identified including a grossly positive node attached to the inferior pole. Representative sections of the specimen are submitted for The remaining tissue is serially sectioned and entirely submitted.

Summary of sections:

NL - nodule left lobe
RL - right lobe
LL - left lobe
IS - isthmus
PL - pyramidal lobe
PLN- lymph nodes adjacent to pyramidal lobe
ILN- lymph node attached to inferior pole, bisected
