Gross Description:

1) The specimen is received fresh, labeled "rule out parathyroid". It consists of one fragment of tan-pink fibrotic tissue measuring 0.3 x 0.3 x 0.2 cm and weighs 3 mg. The specimen is entirely submitted for frozen section.

Summary of sections:
FSC-frozen section control

2) The specimen is received fresh, labeled "Total thyroidectomy" and consists of a thyroid weighing 26.5g. The right lobe measures 6.0 x 2.5 x 2.5 cm, the left lobe measures 4.0 x 2.5 x 1.1 cm and the isthmus measures 2.0 x 2.0 x 0.6 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals a 3.0 x 2.5 x 2.5 cm pink-tan nodule in the right lobe. The nodule abuts the anterior and posterior capsules and is focally cystic. Further sectioning reveals two firm white nodules in the isthmus measuring 0.3 x 0.2 x 0.2 and 0.6 x 0.5 x 0.5 cm. Both nodules are abutting the anterior surface. The remaining thyroid parenchyma is red tan and beefy. Representative sections of the specimen are submitted for TPS, and a photograph has been taken. The remaining tissue is serially sectioned and entirely submitted.

Summary of sections:
N - nodule
RL - right lobe
LL - left lobe
I1--smaller isthmus nodule
I2--larger isthmus nodule
IS - isthmus
