PART #1: TOTAL THYROID AND CENTRAL NECK
Dictated:

The specimen is received fresh, labeled with the patient's name, xxxx, and designated 'Total Thyroid and Central Neck.' The specimen consists of a complete intact thyroid weighing 18.3 grams and measures 8.0 x 4.0 x 0.8 cm in total. The specimen has been oriented with a stitch to indicate the tumor nodule. The posterior surface is inked black and the anterior surface orange. The specimen is serially sectioned from superior to inferior to reveal a tan nodule with infiltrative borders and cystic areas that measure 2.6 x 1.6 x 1.1 cm located in the isthmus lobe. The nodule grossly abuts the posterior margin. Sectioning through the remainder of the right and left lobes does not reveal any other grossly identifiable nodules. The right lobe measures 3.6 x 2.1 x 0.8 cm and the left 2.0 x 2.1 x 0.5 cm. The isthmus measures 3.0 x 1.5 x 1.4 cm. The thyroid specimen also comes with a small central neck dissection measuring 1.5 x 0.3 x 0.3 cm. The soft tissue is submitted in its entirety, although no grossly identifiable lymph nodes are seen. The specimen is submitted in its entirety.
