Gross Description

1. The specimen labelled with the patient's name and as "Parathyroid: Query parathyroid" consists of a piece of tan tissue that weighs 0.003 g and measures 0.2 cm. It is frozen for intraoperative consultation.
1A- frozen section block resubmitted.

2. The specimen labeled with the patient's name and as "Thyroid: Total-stitch marks upper pole right lobe (fresh for tissue banking)" consists of a thyroid gland that is oriented with a stitch and weighs 19.6 g. The right lobe measures 5.0 cm SI x 2.3 cm ML x 1.5 cm AP, the left lobe measures 3.7 cm SI x 2.3 cm ML x 1.2 cm AP and the isthmus measures 2.0 cm SI x 1.7 cm ML x 0.5 cm AP. The external surfaces have fibrous adhesions and are painted with silver nitrate. The upper to mid right lobe contains a well-delineated solid nodule that measures 3.0 x 2.5 x 2.0 cm. The remainder of the thyroid tissue is grossly unremarkable. Sections of right lobe nodule and normal tissue are stored frozen. The remainder of the specimen is submitted as follows:

2A-F- right lobe, superior to inferior

2G-H- isthmus

2I-M- left lobe, superior to inferior
