Gross Description:

1) The specimen is received fresh, labeled "Total thyroid", and consists of a thyroid weighing 8.5 g. The right lobe measures 3.5 x 2 x 0.8 cm, the left lobe measures 3 x 2 x 0.8 cm and the isthmus measures 1 x 1 x 0.4 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals a nodule measuring 1.0 x 0.6 x 0.6 cm. The nodule is located in the middle lateral portion of the right lobe, displays white cut surfaces, and is not encapsulated. Sections through the remaining tissue reveal unremarkable cut surfaces. The remaining thyroid parenchyma is red brown and beefy. Representative sections of the specimen are submitted for TPS. The remainder of the specimen is entirely submitted for permanent histologic examination.

Summary of sections:

N - nodule, entirely submitted
RL - right lobe
LL - left lobe
IS - isthmus
ADDR - remainder of the right lobe
ADDL - remainder of the left lobe
