PART #1: TOTAL THYROID

Dictated:

The specimen is received fresh labeled with the patient's name, xxxx and is designated 'total thyroid'. The specimen has been previously oriented with a stitch marking the right thyroid tumor. The total thyroid weight is 24.14 gm and measures 8.1 x 7.0 x 2.0 cm. The left lobe measures 4.4 x 2.7 x 0.3 cm, while the right lobe measures 6.0 x 2.5 x 2.0 cm. The uninvolved thyroid parenchyma is beefy red with no obvious lesions. There is a suture marking the 'right thyroid tumor'. The anterior aspect of the specimen is inked orange while the posterior aspect is inked black. Serial sectioning reveals a lesion size of 2.5 x 2.0 x 2.0 cm in the right inferior lobe. This tumor is relatively well circumscribed with a variegated white-yellow appearance which is firm on palpation. A portion of this tumor is harvested by the tissue bank. Photographs are taken. Representative sections are submitted.
