Gross Description:

1) The specimen is received fresh, labeled "total thyroid" and consists of a thyroid weighing 37 g. The right lobe measures 6 x 3.5 x 3 cm, the left lobe measures 3.5 x 2.5 x 1.5 cm and the isthmus measures 1 x 0.5 x 0.3 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals a well-circumscribed, thinly encapsulated, solid, tan mass in the right lobe with dimensions of 4.9 x 3.5 x 2 cm. There is focal central cystic change. There is also a separate well circumscribed, tan nodule in the left lobe with dimensions of 0.8 x 0.6 x 0.6 cm. The remaining thyroid parenchyma is red tan and beefy. Representative sections of the specimen are submitted for TPS. The remaining tissue is serially sectioned and entirely submitted.

Summary of sections:

MRL- mass right lobe

NLL- nodule left lobe

RL - right lobe

LL - left lobe

IS - isthmus
