Gross Description:

1. The specimen is received fresh for frozen section consultation, labeled "Delphian lymph node" and consists of a single tan firm lymph node measuring 0.3 cm. The specimen is entirely submitted for frozen section.

Summary of sections:

FSC - frozen section control

2. The specimen is received fresh for frozen section consultation, labeled "Left lower parathyroid, rule out" and consists of a single tan soft tissue fragment measuring 0.3 cm. The specimen is entirely submitted for frozen section.

Summary of sections:

FSC - frozen section control

3. The specimen is received fresh for frozen section consultation, labeled "Left paratracheal tissue" and consists of a single tan soft tissue fragment measuring 2.0 x 0.6 x 0.5 cm. The specimen is entirely submitted for frozen section.

Summary of sections:

FSC - frozen section control

4). The specimen is received fresh and placed in formalin, labeled "Total thyroidectomy, stitch marks left lobe of thyroid " and consists of a thyroid weighing 15 g after fixation. The right lobe measures 4 x 2.5 x 0.8 cm , the left lobe measures 4 x 2.5 x 1.2 cm and the isthmus measures 2 x 0.5 x 0.4 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning the left lobe reveals a 1 x 1 x 0.9 cm white-tan nodule. Sections through the remaining tissue is unremarkable. The remaining thyroid parenchyma is red tan and beefy. Representative sections of the specimen was submitted for and a photograph has been taken. The remaining tissue is serially sectioned and entirely submitted.

Summary of sections:

N - nodule, left lobe
LL - left lobe
RL - right lobe
IS - isthmus

5). The specimen is received in formalin, labeled " pretracheal tissue " and consists of a 1 x 0.4 x 0.2 cm fragment of tan soft tissue. Entirely submitted in toto.
