Gross Description:

1. The specimen is received fresh for frozen section labeled "exclude parathyroid" is a 0.2 cm red soft tissue fragment. The specimen is submitted in toto for frozen section.

Summary of sections:

FSC-frozen section control

2). The specimen is received fresh and is labeled "Right thyroid lobe, long stitch superior, short stitch isthmus". It consists of a thyroid lobe measuring 5.3 x 3 x 1.7 cm and weighing 8 g. The surface is disrupted in the posterior superior aspect. The lobe is inked black posterior and blue anterior. Serial sectioning reveals two lesions: 1.3 x 0.7 x 0.6 cm white solid nodule in superior/mid lobe abutting posterior margin (N1) and 0.5 x 0.3 x 0.2 cm solid white nodule in lower lobe (N2). The specimen is entirely submitted to include TPS from both nodules.

Summary of sections:

N1 - larger nodule
N2 - smaller nodule
RL - remaining lobe
I - isthmus

3). The specimen is received fresh and is labeled "Left thyroid lobe, stitch marks superior pole". It consists of a thyroid lobe measuring 4.3 x 2.8 x 1.4 cm and weighing 7.5 g. The lobe is inked black posterior and blue anterior. Serial sectioning reveals a 0.3 x 0.3 x 0.2 cm white fibrotic area abutting the posterior margin in the mid lobe. The remaining cut surface is unremarkable. The specimen is entirely submitted.

Summary of sections:

L - lesion
RL - remaining lobe
