Gross Description:

1). Received fresh without fixative labeled "thyroid gland" is 22g thyroid. The right lobe measures 5.1 x 2.1 x 1.5 cm, the left lobe measures 5.0 x 2.1 x 2.1 cm and the isthmus measures 3.1 x 1.3 x 0.5 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals multiple nodules in both the left and right lobes. The largest nodule is in the right lobe (nodule one) which is 2.1 x 2.1 x 1.9 cm and has a glistening multicystic cut surface. Superior to the nodule #1 is a 0.9 x 0.8 x 0.8 cm nodule with a brown tan cut surface (nodule two). In the left lobe there is a 0.8 x 0.6 x 0.4 cm nodule with a white-tan cut surface (nodule three). The remaining thyroid parenchyma is red brown and beefy. The specimen is entirely submitted for diagnosis and
