Gross Description:

1) The specimen is received fresh, labeled "total thyroid" and consists of a thyroid weighing 14 g. The right lobe measures 5 x 3.2 x 0.7 cm, the left lobe measures 3.6 x 2.4 x 1 cm and the isthmus measures 1.8 x 0.4 x 0.3 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals a 1.3 x 0.9 x 0.8 cm non-encapsulated partially cystic nodule with calcifications located in the mid left pole. Sections through the remaining tissue is unremarkable. The remaining thyroid parenchyma is red tan and beefy. Representative sections of the specimen are submitted for microscopic examination. The remaining tissue is serially sectioned and entirely submitted.
