Gross Description

1. The specimen labelled with the patient's name and as "Thyroid: Right upper parathyroid" consists of a tiny fragment of tissue that weighs 0.004 g and measures 0.1 x 0.1 x 0.1 cm. It is frozen for intraoperative consultation.

1A frozen section block resubmitted

2. The specimen labeled with the patient's name and as "Thyroid: Right upper thyroid stitch marks upper pole", consists of a lobe of thyroid that is oriented with a suture. It measures 4.3 cm SI x 3.0 cm ML x 1.5 cm AP and weighs 11.58 g. The external surfaces have fibrous adhesions. No parathyroid glands or lymph nodes are identified grossly. The external surface is painted with Silver nitrate. The upper lobe contains two well delineated nodules that measure 2.1 cm SI x 2.9 cm ML x 1.4 cm AP and 0.6 cm SI x 0.7 cm ML x 0.6 cm AP. The remainder of the thyroid tissue is unremarkable. Sections of nodule and normal tissue are stored frozen. The remainder of the specimen is submitted as follows:

2A-J lobe, superior to inferior
