Redacted

Specimen(s) Received

1. Lymph node: Query right paratracheal QS
2. Lymph node: Right paratracheal lymph nodes
3. Parathyroid: Adenoma
4. Thyroid: Right thyroid lobe and isthmus, stitch right superior pole

Diagnosis

1, 2. No pathological diagnosis: Lymph nodes, 4 (right paratracheal) biopsies

3. Enlarged cellular gland consistent with diffuse hyperplasia: Parathyroid (site not specified) parathyroidectomy specimen

4. Multifocal papillary carcinoma, 3.7 cm right, and 0.3 cm isthmus; underlying nodular hyperplasia: Thyroid

 No pathological diagnosis: Lymph node
 - (right) hemithyroidectomy specimen
Synoptic Data

Specimen Type:	Right Hemi-Thyroidectomy
Tumour Focality:	Multifocal
-----Dominant Tumour-----	
Histologic Type:	Papillary carcinoma, follicular variant
Tumour Site:	Right Lobe
Tumour Size:	Greatest Dimension: 3.7 cm
	Additional Dimensions: 2.8 x 1.8 cm
Capsular Invasion:	Encapsulated
	Locally invasive
Extrathyroidal Extension:	Absent
Margins:	Margins uninvolved by carcinoma

Criteria	Yes	No
Diagnosis Discrepancy		X
Primary Tumor Site Discrepancy		X
HIPAA Discrepancy		X
Prior Malignancy History		X
Dual/Synchronous Primary Noted		X
Case In (circle):	QUALIFIED	DISQUALIFIED
Reviewed By:	<i>lw</i>	
Date Reviewed:	3/6/11	

Venous/Lymphatic (Large/Small Vessel) Invasion (V/L): Absent

-----Secondary Tumour-----

Histologic Type: Papillary carcinoma, follicular variant

Tumour Site: Isthmus

Tumour Size: Greatest Dimension: 0.3 cm

Capsular Invasion: Unencapsulated

Extrathyroidal Extension: Absent

Margins: Margins uninvolved by carcinoma

Venous/Lymphatic (Large/Small Vessel) Invasion (V/L): Absent

Pathologic Staging (pTNM): pT2: Tumor more than 2 cm, but not more than 4 cm,
limited to thyroid

pN0: No regional lymph node metastasis

Number of regional lymph nodes examined: 5

Number of regional lymph nodes involved: 0

pMX: Distant metastasis cannot be assessed

Additional Pathologic Findings: Nodular hyperplasia

verified by:

Electronically

MD

Gross Description

1. The specimen labeled with the patient's name and as "lymph node: Query right paratracheal qs" consists of a piece of tissue that measures 0.5 x 0.4 x 0.3 cm. It is frozen for intraoperative consultation.

1A frozen section block resubmitted

2. The specimen labeled with the patient's name and as "lymph node: Right paratracheal lymph nodes" consists of four pieces of tissue that measure from 0.2 x 0.2 x 0.1 cm to 0.5 x 0.4 x 0.2 cm.

2A submitted in toto

3. The specimen labeled with the patient's name and as "parathyroid: Adenoma" consists of one piece of red-tan nodular tissue that measures 1.8 x 0.8 x 0.5 cm.

3A bisected and submitted in toto

4. The specimen labeled with the patient's name and as "right thyroid lobe and isthmus, stitch right superior pole" consists of a right hemithyroidectomy specimen that is oriented with a suture and weighs 15.6 g. The lobe measures 4.5 cm SI x 3.0 cm ML x 2.0 cm AP and the isthmus measures 2.0 SI x 0.7 cm ML x 0.7 cm AP. The external surfaces have fibrous adhesions. No parathyroid glands or lymph nodes are identified grossly. The external surface is painted with silver nitrate. The lobe contains a well delineated solid nodule that measures 3.7 x 2.8 x 1.8 cm. The isthmus contains two well delineated solid nodules that measure 0.2 x 0.2 x 0.2 cm and 0.3 x 0.3 x 0.3 cm. The remainder of the thyroid tissue is grossly unremarkable. Sections of the right lobe nodule and normal tissue are stored frozen. The remainder of the specimen is submitted as follows:

4A-4I lobe, superior to inferior

4J, 4K isthmus

Quick Section Diagnosis

1A - Benign lymph node. Reported

MD

Microscopic Description

IMMUNOHISTOCHEMISTRY: AE1/AE3 immunostaining in specimen 2 (right paratracheal lymph nodes) is negative.
