Case type: Surgical Case

DIAGNOSIS

- (A) CONFIRM PARATHYROID:
Parathyroid tissue, no tumor present.

ICD-0-3

Carcinoma, papillary, thyroid
8260/3

- (B) THYROID AND LEVEL 6 CONTENTS
PAPILLARY THYROID CARCINOMA, CONVENTIONAL TYPE

Site: thyroid, NOS C73.9

Location: Isthmus

Multi-focal: No

Size = 1.6 cm

Extrathyroidal extension: Absent

Lymphovascular invasion: Present

Resection Margins: Negative

Background Thyroid: Chronic lymphocytic thyroiditis consistent with Hashimoto's thyroiditis

Lymph nodes:

METASTATIC PAPILLARY THYROID CARCINOMA IN 10 OF 17 LYMPH NODES

Location: Periglandular

Extracapsular extension: Absent

Thymus, no tumor present.

hw
6/17/12

- (C) RIGHT LEVEL 4:
METASTATIC PAPILLARY THYROID CARCINOMA IN 1 OF 5 LYMPH NODES
Extracapsular extension: Absent

- (D) LEVEL 4 AND 5 B
METASTATIC PAPILLARY THYROID CARCINOMA IN 2 OF 18 LYMPH NODES
Extracapsular extension: Absent

GROSS DESCRIPTION

(A) CONFIRM PARATHYROID – A fragment of tan-red soft tissue, measuring 0.3 x 0.2 x 0.2 cm. Touch preparation has been performed and the entire specimen is submitted for frozen section.

SECTION CODE: A, the entire specimen, for frozen section.

*FS/DX: PARATHYROID TISSUE PRESENT.

(B) THYROID AND LEVEL 6 CONTENTS - The specimen has an overall measurement of 7.0 x 5.0 x 1.5 cm and consists of a thyroid, including right lobe (5.5 x 2.2 x 1.1 cm), left lobe, (3.8 x 2.2 x 1.1 cm), a prominent isthmus (4.0 x 3.5 x 0.8 cm) and fibroadipose tissue (4.0 x 3.0 x 1.5 cm) attached to the inferior aspect of the thyroid (level 6 contents).

A dominant nodule (1.6 x 1.1 x 0.7 cm) is found in the lower pole of the isthmus adjacent to the left lobe. The nodule is composed of white-yellow homogeneous tissue and is well circumscribed.

Accession

The right lobe of the thyroid is unremarkable and composed of homogeneous red-brown tissue. The left lobe of the thyroid is unremarkable and composed of homogeneous red-brown tissue. Attached to the lower portion of the isthmus, a piece of adipose tissue admixed with several lymph nodes is identified. This area is dissected for lymph nodes.

SECTION CODE: B1-B3, dominant nodule from the isthmus from medial to lateral; B4, left lobule, representative sections, lower pole; B5, left lobule, representative sections, upper pole; B6, lower pole, right lobule; B7, upper pole, right lobule, representative sections; B8, four possible lymph nodes; B9, four possible lymph nodes; B10, one lymph node; B11, two lymph nodes; B12, one lymph node; B13, one lymph node; B14, one lymph node bisected; B15, one lymph node bisected; B16, one lymph node bisected.

(C) RIGHT LEVEL 4 – A single fragment of fibrofatty tissue measuring 2.0 x 1.5 x 0.8 cm. Dissection reveals multiple possible lymph nodes ranging from 0.5 up to 1.2 cm in greatest dimension. Possible lymph nodes are entirely submitted.

SECTION CODE: C1, four possible lymph nodes; C2, one sectioned possible lymph node.

(D) LEVEL 4 AND 5 B – A single fragment of fatty tissue measuring 3.8 x 3.0 x 0.8 cm. Multiple possible lymph nodes are identified ranging from 0.4 up to 1.2 cm in greatest dimension. Possible lymph nodes are entirely submitted.

SECTION CODE: D1, five possible lymph nodes; D2, five possible lymph nodes; D3, five possible lymph nodes; D4, three possible lymph nodes; D5, one bisected possible lymph node.

CLINICAL HISTORY

Papillary thyroid cancer.
