GROSS DESCRIPTION:

A. THYROID GLAND

Received fresh labeled with the patient's identification and "thyroid gland" is a 20 g thyroid gland oriented with a single suture designating the left superior pole and a double suture-the right inferior pole. The right lobe is 4.4 x 3 x 0.9 cm, isthmus is 1 x 1 x 0.2 cm and the left lobe is 4.3 x 3.2 x 1.8 cm. The capsule is torn and ragged. Ink code: Right anterior-blue, anterior isthmus-yellow, left anterior lobe-orange, posterior aspect-black. On sectioning, the right lobe contains multiple firm tan nodules ranging from 0.2-0.9 cm. There are colloid nodules, 0.2-0.8 cm. The isthmus and left lobe contain colloid nodules ranging from 0.2-0.4 cm. Tissue is procured. Submitted entirely:

A1: right superior pole, perpendicular sections

A2-A11: right lobe serially submitted from superior to inferior

A12: isthmus

A13-A20: left lobe serially segmented from superior to inferior

B. ? RIGHT PARATHYROID GLAND BIOPSY

Received fresh for frozen section labeled with the patient's identification and '? right parathyroid gland tissue' is a tan pink soft tissue fragment 0.6 x 0.2 x 0.1cm. Toto FSB.

C. RIGHT TRACHEOESOPHAGEAL GROOVE AND SUPERIOR MEDIASTINAL CONTENT

Received fresh labeled with the patient's identification and 'right tracheoesophageal groove and superior mediastinal content' is an unoriented tan pink soft tissue fragment 14 x 3 x 1.8cm. Dissection reveals sixteen lymph nodes ranging from 0.2 x 0.2 x 0.2cm to 2.5 x 2.4 x 2cm. The largest lymph nodes are sectioned to reveal a tan red-homogenous cut surface. A portion of the specimen is submitted for tissue procurement.

C1: four lymph nodes

C2: four lymph nodes

C3: five lymph nodes

C4: one lymph node

C5: one lymph node

C6: largest lymph node

D. LEVEL 1 LYMPH NODE

Received fresh labeled with the patient's identification and 'level 1 lymph node' is a tan pink lymph node 1.3 x 1.3 x 0.7cm. The specimen is trisected. Toto D1.

E. RIGHT NECK CONTENTS LEVELS 2,3,4,5

Received fresh labeled with the patient's identification and 'right neck contents levels 2,3,4 and 5' is an oriented tan pink soft tissue fragment 16 x 14 x 3cm. The specimen is divided in to levels 2,3,4 and 5. Level II is 10 x 7 x 3cm. Dissection reveals eleven lymph nodes ranging from 0.3 x 0.2 x 0.2cm to 6.5 x 3.4 x 3cm. Level III is 5.5 x 3.5 x 2cm. Dissection reveals seven lymph nodes ranging from 0.5 x 0.4 x 0.4cm to 1.7 x 0.8 x 0.8cm. Level IV is 7.5 x 4.3 x 3cm. Dissection reveals nine lymph nodes ranging from 0.3 x 0.2 x 0.2cm to 3 x 2 x 2cm. Level V is 5 x 2.8 x 2.2cm. Dissection reveals one lymph node 1.3 x 1 x 0.5cm. A portion of the specimen is submitted for tissue procurement.

E1: four lymph nodes

E2: three lymph nodes

E3: two lymph nodes
 E4-E5: one lymph node
 E6-E7: representative section of largest lymph node
 Level III
 E8: four lymph nodes
 E9: three lymph nodes
 Level IV
 E10: four lymph nodes
 E11: four lymph nodes
 E12: representative sections of largest lymph node
 Level V
 E13: one lymph node
 F. SUPERFICIAL LEVEL 4 TISSUE

Received in formalin labeled with the patient's identification and designated "superficial level 4 tissue" is an unoriented fragment of red-tan soft tissue measuring 4 x 2.5 x 0.4 CM. Entirely submitted, F1-F3.
