Clinical History

papillary thyroid ca

Gross Description

1. The specimen labeled with the patient's name and as "Parathyroid: Right lower" consists of a piece of tissue that weighs 0.003 g and measures 0.2 x 0.1 x 0.1 cm. It is frozen for intraoperative consultation.

1A frozen section block resubmitted

2. The specimen labeled with the patient's name and as "Thyroid: Total thyroid stitch marks upper pole right lobe fresh" consists of a thyroid gland that is oriented with a stitch and weighs 32.4 g. The right lobe measures 6.3 cm SI x 2.7 cm ML x 1.4 cm AP, the left lobe measures 5.9 cm SI x 2.9 cm ML x 1.7 cm AP and the isthmus measures 3.6 cm SI x 1.5 cm ML x 1.0 cm AP. The external surfaces have fibrous adhesions. No parathyroid glands and lymph nodes are identified grossly. The external surface is painted with Silver nitrate. The left upper lobe contains a well delineated nodule that measures 0.8 cm SI x 0.8 cm ML x 1.1 cm AP. The remainder of the thyroid tissue is grossly unremarkable. Sections of left lobe nodule and normal tissue are stored frozen. The remainder of the specimen is submitted as follows:

2A-K right lobe, superior to inferior

isthmus

2C-W left lobe, superior to inferior
