Gross Description:

1. The specimen is received fresh for frozen section consultation, labeled "tissue of cricoid cartilage", and consists of a fragment of tan-pink soft tissue measuring 0.4 x 0.3 x 0.1 cm. The specimen is entirely submitted for frozen section.

Summary of sections:
FSC - frozen section control

2. The specimen is received fresh, labeled "Pre-tracheal lymph node" and consists of a firm tan lymph node measuring 0.3 x 0.2 x 0.1 cm. The lymph node is entirely submitted.

Summary of sections:
LN - lymph node

3. The specimen is received fresh, labeled "Delphian lymph node" and consists of a possible lymph node measuring 1.5 x 1.0 x 0.2 cm. The specimen is entirely submitted.

Summary of sections:
PLN - possible lymph node

4. The specimen is received fresh, labeled "Pyramidal lobe" and consists of an irregular fragment of soft tissue measuring 1.3 x 0.5 x 0.4 cm. The specimen is bisected and entirely submitted.

Summary of sections:
U - undesignated

5. The specimen is received fresh, labeled "total thyroidectomy stitch marks left lobe of thyroid", and consists of a thyroid weighing 16.4 g. The right lobe measures 4.2 x 3.2 x 1.1 cm, the left lobe measures 4.1 x 3.3 x 1.1 cm and the isthmus measures 1.4 x 0.5 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals a 1.1 x 0.7 x 0.6 cm nodule that is tan white and well-circumscribed. The nodule is located in the left inferior lobe. Sections through the remaining tissue reveals an additional tan white well circumscribed nodule that is located in the right upper pole and measures 0.7 x 0.5 x 0.4 cm. The remaining thyroid parenchyma is red brown and beefy. Representative sections of the specimen are submitted for TPS. The remaining tissue is serially sectioned and entirely submitted.

Summary of sections:
NL - nodule left, entirely submitted
NR - nodule right, entirely submitted
RL - right lobe
LL - left lobe
IS - isthmus
