The specimen is received fresh labeled with the patient's name, xxxx and is designated 'total thyroid'. The specimen consists of a grossly recognizable thyroid weighing 39.0 gm. The left lobe measures 5.6 x 3.0 x 2.0 cm and the right lobe measures 6.0 x 3.0 x 1.7 cm. The isthmus measures 4.0 x 1.2 x 0.5 cm. The anterior aspect of the specimen is inked black and the posterior aspect of the specimen is inked orange. A stitch is noted on the specimen marking a thyroid nodule. The specimen is serially sectioned from superior to inferior and grossly there is no nodule associated with the suture. A tan-white and well circumscribed nodule is noted and located in the superior portion of the left lobe measuring 0.6 x 0.5 x 0.4 cm. Upon cut section, the nodule has a tan-white appearance with no hemorrhage or necrosis identified. The uninvolved thyroid has a tan-brown appearance and is grossly unremarkable.
