Gross Description:

1). The specimen is received fresh, labeled "right level three, four and five lymph node neck, fresh and sterile" and consists of multiple pink tan firm lymph nodes ranging from 0.5 to 1.3 cm in greatest dimension. All identified lymph nodes are submitted in three cassettes

Summary of sections:

LN - lymph node

2). The specimen is received fresh, labeled "Delphian lymph node, fresh/sterile" and consists of a single irregular portion of pink tan firm soft tissue ranging from 1.4 x 0.6 x 0.3cm in greatest dimension. The lymph node is entirely submitted in one cassette.

Summary of sections:

U -- undesignated

3). The specimen is received fresh for frozen section labeled "pretracheal and superior mediastinal lymph nodes", and consists of one tan yellow fibroadipose tissue measuring 1.7 x 1.1 x 0.3 cm with two possible lymph nodes. Entirely submitted.

Summary of sections:

FS -- frozen section control

4). The specimen is received fresh for frozen section labeled, "right paratracheal lymph nodes", and consists of one tan red lymph node measuring 1.0 x 0.7 x 0.2 cm. Entirely submitted.

Summary of sections:

FS -- frozen section control

5). The specimen is received fresh, labeled "right crico-thyroid lymph node, fresh" and consists of a single pink tan firm lymph node measuring 0.4 x 0.2 x 0.2 cm. The lymph node is entirely submitted in one cassette.

Summary of sections:

LN - lymph node

6). The specimen is received fresh, labeled "additional Delphian lymph node, fresh" and consists of a single pink tan firm lymph node measuring 0.5 x 0.4 x 0.2 cm. The lymph node is entirely submitted in one cassette.

Summary of sections:

LN - lymph node

7) The specimen is received in formalin, labeled "left paratracheal lymph node" and consists of a single pink tan firm lymph node measuring 0.4 cm in greatest dimension. Entirely submitted.

Summary of sections:
LN - lymph node

8). The specimen is received fresh, labeled "total thyroid, stitch marks right lobe of thyroid" and consists of a thyroid weighing 23 g. The right lobe measures 5.0 x 3.5 x 1.5 cm, the left lobe measures 3.5 x 2.5 x 1.2 cm and the isthmus measures 2.0 x 0.5 x 0.5 cm. The external surface is covered by a thin fibrous capsule and few skeletal muscle anteriorly. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning reveals a tan-white hard nodule in the right lobe measuring 2.2 x 1.5 x 1.1 cm. The remaining thyroid parenchyma is red tan and beefy. Representative sections of the specimen is submitted for TPS. The remaining tissue is serially sectioned and entirely submitted.

Summary of sections:
RL - right lobe
LL - left lobe
IS - isthmus

9). The specimen is received in formalin, labeled "pretracheal node" and consists of a single lymph node measuring 0.5 x 0.3 x 0.3 cm. The lymph node is bisected and entirely submitted.

Summary of sections:
BLN - bisected lymph node

10). The specimen is received in formalin, labeled "Right level 2 lymph node(neck)" and consists of a single lymph node measuring 1.1 x 0.7 x 0.3 cm. The lymph node is bisected and entirely submitted.

Summary of sections:
BLN - bisected lymph node

11). The specimen is received in formalin, labeled "Additional pretracheal lymph nodes" and consists of a single lymph node measuring 0.5 x 0.4 x 0.3 cm. The lymph node is bisected and entirely submitted.

Summary of sections:
BLN - bisected lymph node

12). The specimen is received in formalin, labeled "Additional left paratracheal lymph nodes" and consists of a three pink-tan lymph nodes ranging from 0.3cm up to 0.5cm. The lymph nodes and the remaining fatty fibrous tissue is entirely submitted.
