PROCEDURE: SPHS

Patient with thyroid nodule. Operative Procedure/Tissue Submitted: Total thyroidectomy with possible CND.

PROCEDURE: SPGD

1. "Total thyroid" A small vial of formalin containing a 13.94 gram total thyroid, with the right lobe measuring 4.3 cm tall x 2.5 cm wide x 1.1 cm deep, and a left lobe, 4.2 cm tall x 2.0 cm wide x 1.5 cm deep, and a 1.2 cm wide, 1.7 cm tall x 1.0 cm deep isthmus. The right lobe is inked green, the isthmus inked yellow, the left lobe inked blue. The left lobe has been previously incised for tissue procurement. The specimen is serially sectioned to reveal a 1.1 x 1.1 x 1.0 cm centrally placed encapsulated cystic nodule with focal calcifications and a granular appearance inside the nodule. The nodule does not appear to involve the peripheral margin. Also identified is a 0.3 cm smooth tan nodule, on the superior aspect of the isthmus, lymph node vs. parathyroid. The specimen is submitted as follows: 1A is the superior left lobe.

1B-C is the left lobe nodule in middle of lobe.

1D is the inferior left lobe.

1E is the isthmus.

1F is the right superior lobe.

1G is right mid lobe.

1H is right lower lobe.

2. "Central neck contents" Received in formalin in a small vial containing three pink-tan bits, 0.5 cm each. Specimen submitted entirely in cassette 2A.

PROCEDURE: SPMI

PAPILLARY THYROID CARCINOMA

1CD-0-3

Carcinoma, papillary, thyroid, 8360/3

Site: thyroid, NOS C73.9

h
10/1/12

Size of largest primary tumor: 1.1 x 1.1 x 1.0 cm

Location(s): Left lobe

Capsular Invasion: No

Vascular Invasion: No

Margins: Negative
