FINAL DIAGNOSIS:**PART 1: THYROID GLAND, TOTAL THYROIDECTOMY (27 GRAMS) -**

- A. TWO (2) FOCI OF PAPILLARY CARCINOMA (0.3 CM AND 1.5 CM), ONCOCYTIC VARIANT, RIGHT LOBE (see comment).
- B. NODULAR THYROID.
- C. CHRONIC LYMPHOCYTIC THYROIDITIS.
- D. THREE (3) BENIGN LYMPH NODES (0/3) (ONE ATTACHED TO RIGHT LOBE AND TWO ATTACHED TO ISTHMUS).
- E. NO PARATHYROIDS ARE SEEN.
- F. PATHOLOGICAL STAGE: pT1 N0 MX.

PART 2: LYMPH NODES, CENTRAL COMPARTMENT, EXCISION -

- A. SIX (6) BENIGN LYMPH NODES (0/6).
- B. THYROID NODULE WITH CHRONIC LYMPHOCYTIC THYROIDITIS AND FIBROSIS.

COMMENT:

As indicated above, we have demonstrated two foci of papillary carcinoma in the right lobe which measure 0.3 cm (follicular variant) and 1.5 cm. (encapsulated with oncocytic features; no capsular invasion is seen) Both of these foci are confined to the thyroid gland with no angiolymphatic or extrathyroidal extension. Margins are free of tumor.

Few of the lymphoid follicles associated with the lymphocytic thyroiditis show atypical features, hence the hematopathologists were consulted for their opinion. The general consensus is that the follicles are reactive.

Molecular studies are being performed on both the foci and the results will follow in an addendum.
