Gross Description:

[REDACTED]

1. The specimen is received fresh labeled "total thyroid" and consists of a thyroid weighing 18.0 g. The right lobe measures 5.5 x 3.0 x 0.9 cm, the left lobe measures 4 x 2 x 1 cm and the isthmus measures 2 x 1.5 x 0.6 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. Sectioning of the left lobe reveals a 1.2 CM light brown nodule with central cystic degeneration, located at the upper pole of the left lobe and abutting the thyroid capsule. Sections through the right lobe reveal red tan and beefy thyroid parenchyma with a vague nodularity (gelatinous fleshy nodules). The isthmus is red tan and beefy. Representative sections of the specimen (left lobe nodule) are submitted for TPS. The remaining tissue is serially sectioned and representatively submitted.

Summary of sections:

N - nodule, entirely submitted

LL - left lobe

RL - right lobe

IS - isthmus
