Gross Description:

1). The specimen is received fresh for frozen section consultation, labeled "right paratracheal tissue" and consists of a piece of soft tissue measuring 0.7 x 0.4 x 0.2 cm. The specimen is entirely submitted for frozen section.

Summary of sections:
FSC - frozen section control

2). The specimen is received fresh, labeled "total thyroid, stitch marks left lobe", and consists of a thyroid weighing 14 g. The right lobe measures 3.5 x 1.5 x 0.6 cm, the left lobe measures 3.5 x 1.5 x 0.8 cm and the isthmus measures 1.5 x 0.6 x 0.4 cm. The external surface is covered by a thin fibrous capsule. The posterior surface of the specimen is inked black, and the anterior is inked blue. The anterior surface of the isthmus is inked green. Sectioning reveals a tan circumscribed nodule in the left lower lobe. The nodule is located in the left lower lobe, measures 1.5 x 1 x 1 cm, displays tan-brown, firm cut surfaces, and is encapsulated. Sections through the remaining tissue reveal unremarkable red-brown and beefy parenchyma. The remaining thyroid parenchyma is red brown and beefy. Representative sections of the specimen are submitted for . The remaining thyroid tissue is serially sectioned and entirely submitted.

Summary of sections:
N - left lobe nodule, entirely submitted
RL - right lobe
LL - left lobe
IS - isthmus
LSK-left skeletal muscle, representative
RSK-right skeletal muscle, representative
