DIAGNOSIS

(A) RIGHT MID JUGULAR LYMPH NODE:

One lymph node, negative for tumor (0/1).

(B) RIGHT SUPERIOR PARATHYROID LYMPH NODE:

One lymph node, negative for tumor (0/1).

(C) RIGHT MEDIASTINAL CONTENTS:

Three lymph nodes, negative for tumor (0/3).

(D) DELPHIAN NODE:

Thyroid parenchyma and fibroconnective tissue, negative for tumor and lymph node.

(E) PORTION OF LEFT SUPERIOR PARATHYROID GLAND:

Minute fragments of parathyroid tissue, no tumor present.

(F) LEFT NECK CONTENTS:

METASTATIC PAPILLARY THYROID CARCINOMA IN ONE OF TWELVE LYMPH NODES (1/12) confined to node.

(G) RIGHT PARATRACHEAL AND MEDIASTINAL CONTENTS:

METASTATIC PAPILLARY THYROID CARCINOMA IN FIVE OF SIXTEEN LYMPH NODES (5/6) confined to node.

(H) TOTAL THYROIDECTOMY AND LEFT PARATRACHEAL MEDIASTINAL CONTENTS:

PAPILLARY THYROID CARCINOMA, CONVENTIONAL TYPE

Location: isthmus

Multi-focal: No

Size = 2.0 cm

Extrathyroidal extension: Present, extending into fibroadipose tissue

Lymphovascular invasion: Absent

Resection Margins: Negative

Background Thyroid: Chronic lymphocytic thyroiditis consistent with Hashimoto's thyroiditis

Lymph nodes: No tumor present in 2 lymph nodes

Parathyroid tissue present (H8)

ICD-0-3

Carcinoma, papillary, thyroid 8260/3

Site: thyroid, NOS C73.9

GROSS DESCRIPTION

DOB:
Physician:

Sex: F

Collected:
Received:

Pathologist:
Case type: Surgical Case

Accession:

- (A) RIGHT MID JUGULAR LYMPH NODE – A single possible lymph node measuring 0.7 cm in its greatest dimension. Entirely submitted in cassette A.
- (B) RIGHT SUPERIOR PARATHYROID LYMPH NODE – A single fragment of fibrofatty tissue measuring 0.8 cm in its greatest dimension. Entirely submitted in cassette B.
- (C) RIGHT MEDIASTINAL CONTENTS – Three fragments of fibrofatty tissue measuring in aggregate 1 x 1 x 0.8 cm. Entirely submitted in cassette C.
- (D) DELPHIAN NODE – A single possible lymph node with attached fatty tissue measuring 1 x 0.8 x 0.4 cm. Entirely submitted in D.
- (E) PORTION OF LEFT SUPERIOR PARATHYROID GLAND – A (0.2 x 0.1 x 0.1 cm) pink-tan soft tissue fragment. Entirely submitted for frozen section diagnosis in E.

*FS/DX: PARATHYROID TISSUE PRESENT.

- (F) LEFT NECK CONTENTS – A single fragment of fibrofatty tissue measuring 6.5 x 3 x 1 cm. Dissection reveals multiple possible lymph nodes ranging from 0.5 up to 0.7 cm in their greatest dimension. Possible lymph nodes are entirely submitted.

SECTION CODE: F1, five possible lymph nodes; F2, five possible lymph nodes; F3, five possible nodes.

- (G) RIGHT PARATRACHEAL AND MEDIASTINAL CONTENTS – A single fragment of fibrofatty tissue measuring 5.5 x 2 x 1.0 cm. Dissection reveals multiple possible lymph nodes, ranging from 0.4 up to 1.1 cm in their greatest dimension. Possible lymph nodes are entirely submitted.

SECTION CODE: G1, six possible lymph nodes; G2, five possible lymph nodes; G3, one sectioned possible lymph node; G4, one sectioned possible lymph node; G5, one lymph node; G6, one lymph node; G7, one lymph node.

- (H) TOTAL THYROIDECTOMY AND LEFT PARATRACHEAL MEDIASTINAL CONTENTS – A total thyroidectomy with anterior strap muscles covering the anterior portion of specimen (6 x 6 x 2 cm). The thyroid shows nodular changes suggestive of chronic lymphocytic thyroiditis. The right lobe has diffuse changes of thyroiditis. Within the isthmus, a superior nodule is firm, tan, extending and focally adherent to the skeletal muscle and extending into the left thyroid lobe (2 x 1.6 x 1.5 cm). The left lobe also shows nodular changes, suggestive of thyroiditis with a slightly firmer and inferior nodule (1.5 x 1 x 0.5 cm). Within the surrounding fibroadipose tissue, possible lymph nodes are identified.

SECTION CODE: H1, H2, sections of right thyroid superior to inferior; H3, H4, tumor at isthmus with attached soft tissue; H5, H6, superior left thyroid and adjacent isthmus nodule; H7, inferior left thyroid; H8, a separate nodule submitted with specimen, bisected; H9, additional possible lymph nodes; H10, additional adipose tissue.

CLINICAL HISTORY

Thyroid lesion.
